PSA

Effective March 13, 2024, The City of West Point Water & Light Department will commence unearthing either side of all water service meters in our certificated service area to identify lead, copper, galvanized, and brass water service line identification for compliance with EPA mandates for establishing a database NLT 15 October 2024. This project will be performed by Knight Environmental Service and Consolidated Pipe. These contractors will not have vehicles marked with a city logo; however, individuals will wear their required uniform along with a city produced ID badge while on public and private property. They will actually unearth and subsequently cover individual water meter sites once the water service line material is identified and recorded. Should you have questions or concerns you can contact (662) 494-2262 from 7 a.m. until 4 p.m. Monday – Friday.
